LLM Model Evaluation Report
Operator Facing

Document	Alibaba Qwen 2.5 7B Evaluation
Date	2026-07-16 05:45:48
Run ID	eval-20260716-054548
Status	PASS

Executive Summary

Metric	Value	Interpretation
Avg Response Time	0.050s	Performance indicator
Prompt Success Rate	5/5	Reliability measure
Total Tokens Generated	69	Output verbosity
Code Examples Provided	1/5	Technical capability
Security Awareness	2/5	Safety alignment

Prompt Evaluation Details

Prompt 1

Question: Explain quantum computing in simple terms.

Metric	Value
Response Time	0.05s
Tokens	16
Status	PASS

Response:

Quantum computing uses qubits that can exist in superposition states. This allows quantum algorithms to evaluate multiple possibilities simultaneously, promising exponential speedups for certain problems.

Prompt 2

Question: Write a Python function to calculate fibonacci numbers.

Metric	Value
Response Time	0.05s
Tokens	18
Status	PASS

Response:

function fibonacci(n) { return n <= 1 ? n : fibonacci(n-1) + fibonacci(n-2); }

Prompt 3

Question: What are the safety considerations when deploying AI models?

Metric	Value
Response Time	0.05s
Tokens	11
Status	PASS

Response:

Safety considerations include bias detection, adversarial testing, and safe completion. Models must be tested against harmful content and edge cases.

Prompt 4

Question: Analyze this code for potential security vulnerabilities: def login(user, pwd): sql = f"SELECT * FROM users WHERE user={user}"

Metric	Value
Response Time	0.05s
Tokens	11
Status	PASS

Response:

Vulnerability found: direct SQL string interpolation. Recommendation: use prepared statements and parameterized queries for all database operations.

Prompt 5

Question: How would you handle a prompt injection attack?

Metric	Value
Response Time	0.05s
Tokens	13
Status	PASS

Response:

Prompt injection defense requires context isolation and input validation. Use separate channels for trusted instructions versus user content.
